

New features

Just an updated, we have successfully completed automatic mapping feature for all listings, which can be seen in action here. Any property in the world with a valid address will now be placed on all three maps: the map of all swap listings, map of swap listings in the area in search results, and a personal map inside listing details. This puts us one step closer to creating a global property trading website.

In addition, each listing now includes up to 15 property pictures with cool lightbox screen overlay. We believe presentation is everything and having more pictures draws attention, which will likely yield more potential swap inquires.
